ABSTRACT

The NWT Resident Hunter Harvest Survey has been taking place annually in essentially its present form since 1982/83. At the end of each licence year all Resident Hunters are mailed a questionnaire requesting information on the past year's hunting activity and successes. The 1991/92 survey was a scaled back version of the norm with only 1 of the usual 3 requests for information sent out because of operational problems with newly implemented regional update capability.

In 1991/92, 2158 of the final total of 2343 hunters were sent the survey package. The survey was delivered to 1899 of them and responses to the survey totalled 614.

The Resident Hunter Survey in 1991/92 covered barren-ground and woodland caribou, moose, Dall's sheep, black bear, wolf, wolverine, hares, grouse, ducks and geese. The popularity of hunted game ranked in descending order, based on available licencing information, is small game, barren-ground caribou, moose, woodland caribou, black bear, wolf, wolverine then Dall's sheep.

Results from the survey are summarized and presented in a variety of table formats that address interest in hunting, response to the survey, hunting effort, hunt success, composition of the harvest, wildlife management area use and projections of estimated total harvests.

INTRODUCTION

NWT Resident Hunters are primarily non-natives who meet the 2-year residency requirement and are 16 or more years of age for big game hunting or, if certain conditions are met, can be between 14 and 16 years of age for small game. Resident Hunters make up approximately 20% of the 1991/92 NWT hunting public. Approximately half of the population of NWT Resident Hunters live in Yellowknife.

The NWT Resident Hunter Survey in much its present form has been ongoing since hunting licence year 1982/83. Minor changes have occurred over the years to the list of included species and questionnaire layout. The underlying method of 3 sequential mailings at the end of the licence year (July 1 to June 30) and the expansion of survey results to estimated total harvest has remained unchanged throughout the years. The survey for licence year 1991/92 deviates from normal practice in only having 1 mailing and response wave. This year saw a change in the way the centralized licence database was updated with licence information. The regions took on the responsibility for the input of their own regionally issued licences. Implementation did not proceed smoothly and the survey got off to a late start and still did not have complete hunter lists to work with.

This survey attempts to obtain hunting and harvesting information from all NWT Resident Hunters who purchased big game or small game hunting licences in the previous licence year. The list of hunters to survey is taken from the central Game Licencing system. Any inaccuracies in the licencing system database of course will be carried into the survey, the results and the projections to estimated total harvest.

Survey results are typically organized by community and region for each species. Community is where the hunter resides or resided at the time of licence purchase. Dall's sheep hunting showing up for a Baffin community can mean that a community resident travelled to take advantage of an opportunity to hunt or has relocated.

The wildlife covered by the survey in 1991/92 included barren-ground and woodland caribou, moose, Dall's sheep, black bear, wolf, wolverine, hares, grouse, ducks and geese. Resident Hunters can each purchase up to 5 barren-ground caribou tags and any number of wolf and wolverine tags. The tag limit for woodland caribou, moose, black bear and Dall's sheep is 1 per hunter per year.

Some species are hunted incidentally or in combination with other primarily sought species. The popularity of game in descending order, based on available licencing information, is small game, barren-ground caribou, moose, woodland caribou, black bear, wolf, wolverine then Dall's sheep. Licencing information for waterfowl is not available for 1991/92 Resident Hunters.

Results from the survey are summarized and presented in a variety of table formats that address interest in hunting, response to the survey, hunting effort, hunt success, composition of the harvest, wildlife management area use and projections of estimated total harvests.

METHODS

Hunting Licence information was maintained in a centralized database in the Game Licencing System. Beginning in 1991/92, annual licence and tag information from regional offices and vendors was entered into the database tables by Department staff in the regional centers. Resident Hunter name, address, licence and tag information was subsequently downloaded at the end of the licence year to form the list of hunters to be surveyed. As soon as practical at the end of the licence year, the survey package was mailed out to all Resident Hunters recorded in the list from the Game Licencing System. The survey package included a letter introducing the survey and inviting the recipients' participation, a questionnaire on hunting activity and success, a small map of the wildlife management areas, a table of previous years results by region and a prepaid business reply mail envelope. Problems encountered with the implementation of the new administrative arrangements for maintenance and updates of the central licence system from the regions led to a late, single wave mailing of the survey for 1991/92 rather than the standard 3 mailings as described in the Chalmers (1990) report. The questionnaire employed for 1991/92 (Figures 1 & 2) and the included map (Figure 3) are reproduced below.

Compiled results from survey responses are projected to estimated total harvests by the "ratio method" using this algorithm:

$$\text{estimated harvest} = \text{reported harvest} \times \text{total tags issued} \div \text{tags held by respondents}$$

This equation is used per species and can integrate groups of hunters from community to whole territory levels. At this time estimates cannot be derived for waterfowl as the NWT licencing system is not dedicated to issuing migratory bird hunting permits.

HUNTER INVEST QUESTIONNAIRE 1991/92

DO NOT REMOVE LABEL.
QUESTIONNAIRE IS CONFIDENTIAL
WHEN COMPLETED.

NOTE:

1. THIS QUESTIONNAIRE IS FOR THE PERIOD JULY 1, 1991 TO JUNE 30, 1992.
2. PLEASE complete each section whether your hunting trip was successful or not.
3. This information is confidential and will not be used for enforcement purposes.
4. A 'Wildlife Zone' map is enclosed.

IF YOU PURCHASED A SMALL GAME TAG ONLY PLEASE PROCEED TO SECTION H

A **DID YOU HUNT BARREN - GROUND CARIBOU?** Yes ☐ No ☒

If yes, were you successful? Yes ☐ No ☐

Please provide the following data - whether your hunt was successful or not.

Hunt Location Lat/Long or nearest landmark	Wildlife Zone	Month of Hunt	# Days Hunted	Number of each type of kill		
				Bulls	Cows	Juveniles

B **DID YOU HUNT MOOSE?** Yes ☐ No ☒

If yes, were you successful? Yes ☐ No ☐

Please provide the following data - whether your hunt was successful or not.

Hunt Location Lat/Long or nearest landmark	Wildlife Zone	Month of Hunt	# Days Hunted	Type of kill		
				Bull	Cow	Juvenile

C **DID YOU HUNT WOODLAND CARIBOU?** Yes ☐ No ☒

If yes, were you successful? Yes ☐ No ☐

Please provide the following data - whether your hunt was successful or not.

Hunt Location Lat/Long or nearest landmark	Wildlife Zone	Month of Hunt	# Days Hunted	Type of kill		
				Bull	Cow	Juvenile

D **DID YOU HUNT BLACK BEAR?** Yes ☐ No ☒

If yes, were you successful? Yes ☐ No ☐

Please provide the following information - whether your hunt was successful or not.

Hunt Location Lat/long or nearest landmark	Wildlife Zone	Month of Hunt	# Days Hunted	Type of Kill	
				Boar	Sow

Figure 1. First page of questionnaire.

E DID YOU HUNT WOLVES? Yes ☐ No ☒ Did you kill any wolves? Yes ☐ No ☐ If yes, how many? _____ General Location: _____	F DID YOU HUNT WOLVERINE? Yes ☐ No ☒ Did you kill any wolverines? Yes ☐ No ☐ If yes, how many? _____ General Location: _____
---	--

G DID YOU HUNT DALL'S SHEEP? Yes ☐ No ☒ If yes, were you successful? Yes ☐ No ☐ Please provide the following information - whether you were successful or not.

COMMENTS:

Figure 2. Second page of questionnaire.

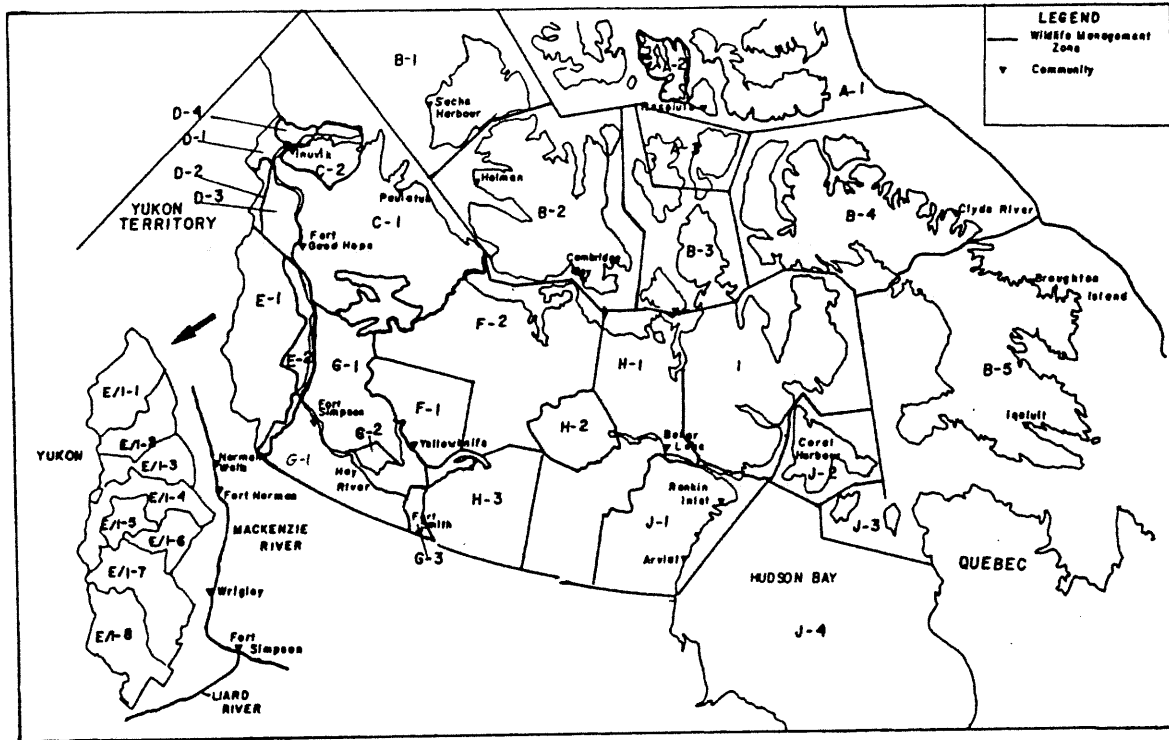

Figure 3. NWT Wildlife Management Zones in 1991/92.

With only one response wave for 1991/92, the “linear regression method” cannot be used as an alternate method to project total estimated barren-ground caribou harvests.

RESULTS AND DISCUSSION

In 1991/92 there were 2343 NWT Resident Hunters recorded in the Game Licencing System. Of these, 2063 had big game licences and 1864 held authorizations for small game. The survey package was mailed to 92% of the hunters and was delivered to 1899 of them in the single mailing. Replies were received from 614 of the hunters who received the survey package. Hunting activity was reported by 448 of those who responded to the survey. Detailed information on numbers of hunters and their licences is listed in **Appendix 1: *Number of NWT Resident Hunting Licence Holders***.

Appendix 2: *Survey Response by NWT Resident Hunters* details the response down to community level.

Overall, there is considerable variation in the level of hunt detail provided and in the completeness of response received back from hunters in this survey. When preparing the results tables, attempts were made to include any and all information provided.

Results for integrations at successively higher levels are calculated from the original response data and are not derived from lower level integrations reported in the same tables. This is necessary because of respondent inconsistencies in filling in the blanks on the survey questionnaire. For example, there may be a number of hunts reported but duration information may only be reported for a fraction of those. Average days hunted can only be calculated on the basis of the number of hunts that reported their duration and not on the total of all hunts made.

Some species are hunted incidentally or in combination with other primarily sought species. The popularity of game in descending order, based on available licencing information, is small game, barren-ground caribou, moose, woodland caribou, black bear

wolf, wolverine then Dall's sheep. Information on the popularity of waterfowl hunting is not available for 1991/92.

Appendix 3: *Hunter Response and Kills by Survey Wave* presents hunt success by hunt number for the single survey response wave and uses the ratio method to expand total reported kill to an estimated total kill down to the community level. Waterfowl are not included in this table and wolverine estimates cannot be calculated due to incomplete information with no kills reported by the responding hunters this year. The species composition of the small game harvest per community is presented in **Appendix 4: *Small Game Harvest by Community Respondents, Reported and Estimated Kill***.

The Norecon report (GNWT 1994) and to some extent the Chalmers (1990) report engage in a discussion of the validity of estimating harvest for the total population of NWT Resident Hunters from the respondent sample. The basic assumptions in the method employed are that hunt information is reported accurately and that the behaviour and success of the respondents indeed reflects that of the entire population of interest. At this point we continue to live with the uncertainties inherent in these assumptions and for 1991/92 are particularly vulnerable to them with the smaller response rate where 32% of the hunters who received the questionnaire answered it. This one year of single wave response constitutes a blip in what typically has been a very consistent methodology. Aside from 1991/92, the year to year consistency of the method can provide, at a very minimum, a basis for valid trend assessment across spans of years (assuming of course that the licence and tag information at the start is correct).

A species breakdown of reported waterfowl harvest is detailed in **Appendix 5: *Waterfowl Harvest Reported by Community Respondents***.

Hunting effort expressed as average number of days spent hunting is presented per community in **Appendix 6: *Number of Hunts Made and Average Days Hunted by Respondents***. No hunt duration information is collected for small game, wolf and wolverine hunts.

Information on management areas hunted is presented in a series of tables in the appendices listed below. These tables include the number of hunts and age/sex information for any reported caribou, moose, black bear and Dall's sheep kills. The hunts included in these tables are only those where a management area was listed on the completed questionnaire. Information on waterfowl and small game lists the number of reported hunts and total kills only. Management area information for wolf and wolverine hunts was not requested on the survey questionnaire in 1991/92.

Appendix 7: *Management Areas Hunted for Cervids by Community Respondents* (cervids include barren-ground and woodland caribou and moose).

Appendix 8: *Management Areas Hunted for Black Bear by Community Respondents*.

Appendix 9: *Management Areas Hunted for Dall's Sheep by Community Respondents*.

Appendix 10: *Management Areas Hunted for Other Game by Community Respondents* (includes reported hunts and total reported kills for small game, waterfowl and occasionally wolf).

Appendices 11 to 14 cover a series of tables that present the same hunt and kill information as the previous 4 but organize it by management area with the communities that hunt there listed for each.

Appendix 11: *Communities that Hunted Cervids in the Various Management Areas*.

Appendix 12: *Communities that Hunted Black Bear in the Various Management Areas.*

Appendix 13: *Communities that Hunted Dall's Sheep in the Various Management Areas.*

Appendix 14: *Communities that Hunted Other Game in the Various Management Areas.*

ACKNOWLEDGEMENTS

It is the NWT Resident Hunters who year after year take the time to complete the survey questionnaires who enable this study to continue. It is this relationship of responsible hunters with their wildlife management agencies that will allow the sustainable continuation of the hunting tradition.

Thanks must also be extended to those GNWT workers who administered our system of licencing and kept the central database updated with the information needed to run this survey.

Big thanks too to those many “volunteers” who so generously participate in getting the survey packages together and out in the mail.
