

Backgrounder

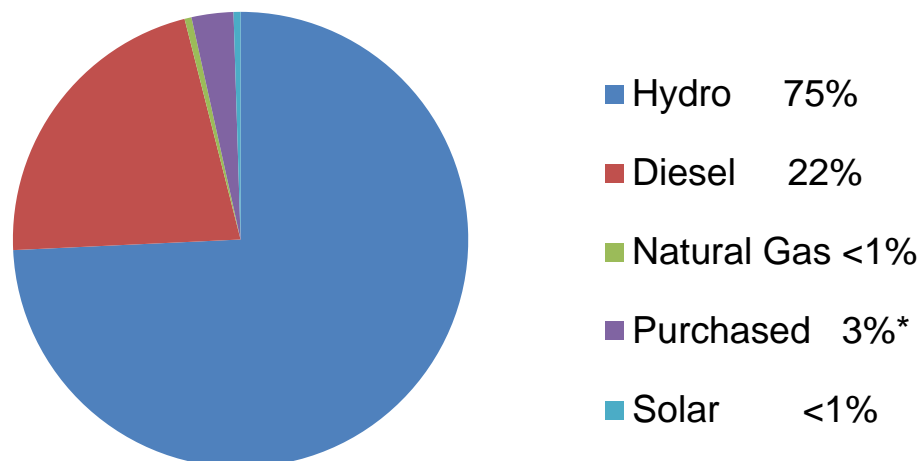

Generation and Low Water in the North Slave

The mix of generation was significantly impacted by low water and will continue to be for the next year. Hydro generation fell 14% and diesel generation rose 12%. The additional two per cent increase was as a result of an increase in LNG generation in Inuvik.

2015 GNWT Generation by Source (Low Water)

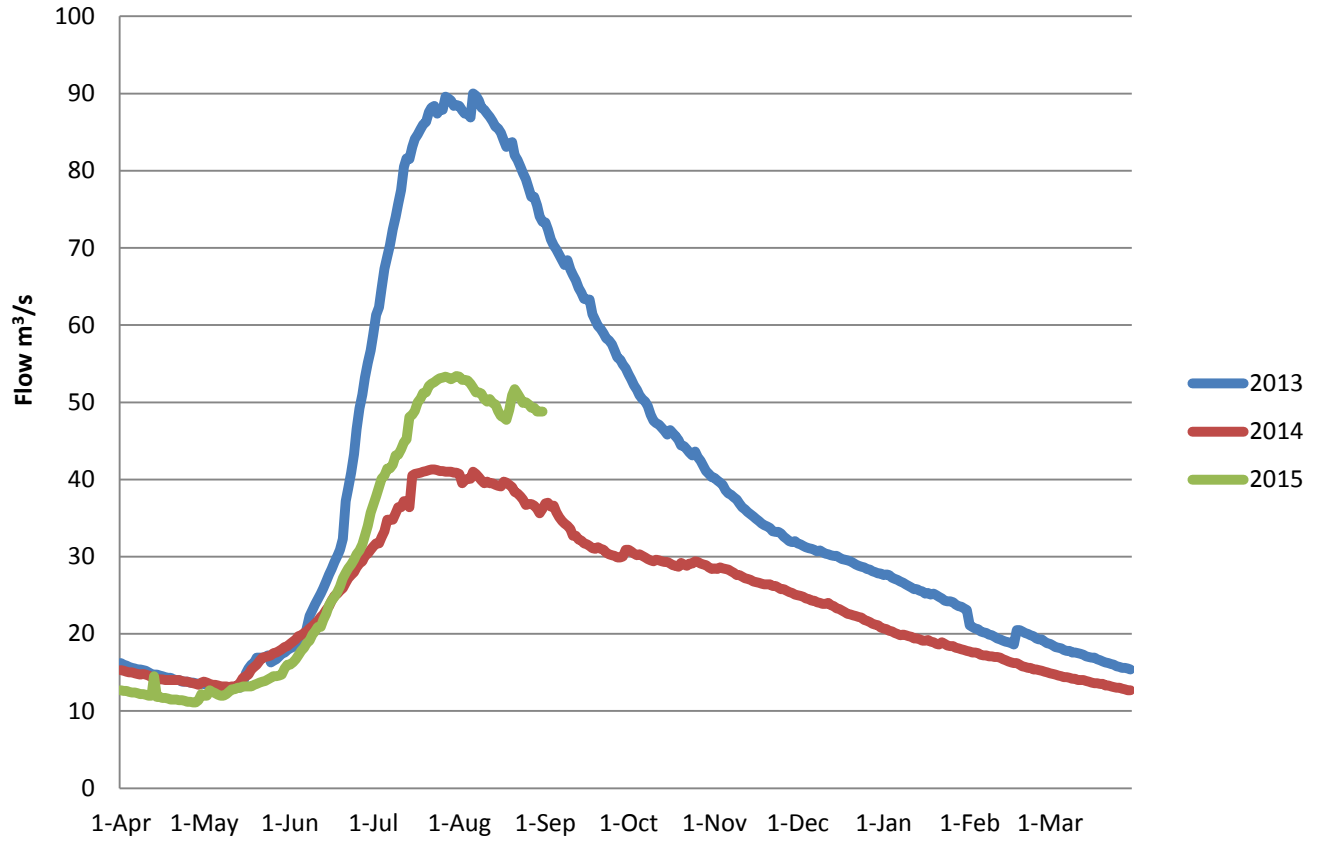

2014 Generation by Source (Normal Water)

* Power is purchased from Imperial Oil Company (IOC) in Norman Wells.
